

80-20 CRM

Simple Developer Build Brief

A simple sales CRM for setters, closers, lead tracking, follow-up, nurturing, Calendly bookings, messaging and reporting.

Keep it simple. If a feature does not help us capture, contact, follow up, book, close, nurture or report on a lead, it is not part of this build.

Main flow

Lead comes in -> Pipeline -> Setter follows up -> Calendly booking -> Closer -> Won / Lost / Nurture -> Reporting & EOD

1. What We Are Building

80-20 CRM is an internal sales CRM. The goal is to keep the entire sales process in one place instead of using Excel sheets, separate notes, scattered WhatsApp chats and manual EOD reports. Every lead should enter the CRM, be assigned to a person, move through a clear pipeline, receive follow-ups, book through Calendly, and end as won, lost or nurture.

What the CRM needs to do

- Store every lead/contact and their details.
- Show every lead inside a visual sales pipeline.
- Let setters and closers move leads between stages with simple buttons or drag-and-drop.
- Keep notes, important conversations, follow-ups and activity under each lead.
- Connect Calendly bookings to the correct lead automatically.
- Send and receive email, SMS and WhatsApp/business-number messages when connected.
- Send bulk campaigns and nurture sequences.
- Track sets, shows, closes, deal value and cash collected.
- Create EOD reporting automatically from CRM activity, with only qualitative notes entered manually.
- Give managers a clear view of team performance and leads needing attention.

Main Navigation / Screens

Keep the left menu simple. The main screens should be: Dashboard, Leads, Pipeline, Conversations, Tasks, Campaigns, Forms, EOD, Reports and Settings.

What this is NOT

- Not a full GoHighLevel clone.
- No funnel/page builder is needed right now.
- No built-in dialer is needed right now; the 80-20 dialer can remain separate and connect later.
- No social media scheduler, courses, reputation management, website builder or other GHL extras.

2. Leads & Contacts

Every person who enters the system should have one lead/contact record. If the same person fills another form, books Calendly or replies to a campaign, update the same record instead of creating duplicates.

- Name, phone, email, company/business name where relevant.
- Source, campaign, ad/creative and UTM information.
- Assigned setter and assigned closer.
- Current pipeline and current stage.
- Tags and custom fields.
- Meeting date/time.
- Deal value, cash collected and payment status.
- Next follow-up / next action.
- Complete activity history.

3. Sales Pipeline

The pipeline is a board where every lead is a card. The team should be able to drag a lead from one stage to another or use quick buttons. Moving a lead should immediately update the lead record and the reporting numbers.

New Lead	Contacted	Call 1	Call 2	Call 3	Call 4	Nurture
Meeting Booked	Confirmed	Showed	Follow-Up / Decision	Closed Won	Closed Lost	

Build the essentials first. This is a sales CRM, not a full GoHighLevel clone.

4. Lead Record - Everything Under One Lead

When a setter or closer opens a lead, they should not need Excel or another app to understand what is happening. The lead page should contain the full sales history.

- 1 Overview** - Contact details, source, tags, setter, closer, stage, meeting, next action, deal value and cash collected.
- 2 Conversation** - Email, SMS and WhatsApp/business-number conversation history in one place when channels are connected.
- 3 Notes** - Manual notes under the lead. Each note shows who wrote it and when. Notes can be pinned or marked Important.
- 4 Important Conversations** - A simple way to mark a conversation/note as important so managers can find it without reading the full history.
- 5 Activity** - Stage changes, calls/attempts, messages, meetings, form submissions, tasks, payments and other actions in time order.
- 6 Form Answers** - All questions and answers submitted by the lead.
- 7 Meetings** - Calendly booking, reschedule, cancellation, show/no-show and closer assigned.
- 8 Payments** - Deal value, amount collected, payment plan and remaining balance if used.

Quick Action Buttons

At the top of the lead record, use small simple buttons. These should update the CRM without making the rep fill long forms.

Call	Message	Email	Add Note	Follow Up	Book	Set
Confirm	Show	No Show	Close	Lost	Nurture	

What the key buttons should do

- 1 **SET** - Choose/set the meeting, assign the closer, move the lead to Meeting Booked and count a set for the setter.
- 2 **SHOW** - Mark the meeting as attended, move the lead to Showed and count the show.
- 3 **CLOSE** - Enter deal value, cash collected and payment details. Move to Closed Won and credit the correct setter/closer.
- 4 **LOST** - Choose a simple lost reason, add an optional note and move to Closed Lost.
- 5 **NURTURE** - Move the lead to Nurture and set the next follow-up date or nurture sequence.

5. Follow-Ups, Tasks & Nurture

Every active lead should be able to have a next action. A rep should quickly set "call tomorrow", "WhatsApp Friday" or "follow up next month". The CRM should then show Today, Upcoming and Overdue follow-ups.

- Task title, due date/time, assigned user, related lead, priority and status.
- Today view for each rep.
- Overdue view for each rep and manager.
- Create follow-up directly from the lead record or conversation.
- Nurture leads can have a future follow-up date or an automated sequence.
- Manager can see leads with no next action.

6. Calendly Integration

Calendly handles the calendar and booking page. 80-20 CRM only needs to listen for the booking events and update the correct lead.

- When a lead books, find the existing lead by email/phone and attach the meeting.
- Move the lead to Meeting Booked.
- Assign the closer if a closer is attached to that Calendly/event type.
- Update reschedules and cancellations.
- Allow show/no-show to be recorded in the CRM.
- Automatically trigger booking confirmation messages by email and SMS/business-number text when a Calendly booking is created.
- Send scheduled reminders before the meeting (for example 24 hours and 1 hour before) using the connected email and/or SMS channel.
- If the meeting is rescheduled, update the meeting in the CRM and send the updated confirmation automatically.
- If the meeting is cancelled or marked no-show, allow an automatic follow-up message/sequence to start.

Build the essentials first. This is a sales CRM, not a full GoHighLevel clone.

- All automated booking messages must be saved in the lead conversation/activity history.

7. Messaging & Business Numbers

The CRM should be able to connect communication channels so the team can message leads without leaving the lead record. Build this as a channel system, so a business can connect what it needs.

- Email.
- SMS/business number.
- WhatsApp Business when connected.
- One-to-one messages from the lead record.
- Replies appear in the same conversation history.
- Message templates/snippets for common follow-ups.
- Delivery/failed status where the provider supports it.
- Opt-out / do-not-contact status.
- Automated messages can be triggered by CRM events such as form submitted, Calendly booked, stage changed, no-show, follow-up due or nurture sequence.

8. Campaigns

This is the GHL-style part we actually need: select a group of leads and send mass email, mass SMS/business-number messages, or mass WhatsApp messages where the relevant channel is connected. Campaigns can be one-off broadcasts or scheduled/drip nurture campaigns.

- Choose audience using filters/tags/stage/source.
- Choose channel: email, SMS or WhatsApp.
- Choose or write a template.
- Personalise with fields such as first name.
- Send now or schedule.
- Mass email to filtered lead lists.
- Mass SMS/business-number messaging to filtered lead lists.
- Mass WhatsApp messaging where the WhatsApp Business connection and approved message rules allow it.
- Support send now, scheduled sends and drip/batched sending.
- Track sent, delivered, failed, replied, clicked/opened where available, and opted out.
- Save campaign results against each lead.

9. Forms & Lead Capture

We do need forms inside the CRM. We do NOT need a full funnel/page builder right now. The VSL, ASL and thank-you pages can be built externally, while the form itself sends all lead data directly into 80-20 CRM.

- Create basic forms inside the CRM.
- Fields: name, email, phone, text, long text, number, dropdown, multiple choice, checkbox and hidden fields.
- Capture UTMs/source/campaign information.
- Choose which pipeline/stage the form feeds into.
- Choose default setter/team assignment.
- Apply tags automatically.
- After submit, redirect to any URL - normally Calendly.
- Allow the form to be embedded on an external VSL/landing page.
- Also provide a simple webhook/API lead receiver for external forms or Meta lead sources.

Example funnel flow

Ad	VSL Page	80-20 Form	Calendly	ASL / Thank	Sales Call	CRM Outcome
----	----------	------------	----------	-------------	------------	-------------

Build the essentials first. This is a sales CRM, not a full GoHighLevel clone.

10. EOD Reporting - Mostly Automatic

The EOD should not make reps retype numbers that the CRM already knows. The CRM should calculate the activity automatically from what happened during the day. The rep only adds short qualitative notes before submitting the EOD.

Automatically pulled from CRM activity

- Leads contacted.
- Follow-ups completed.
- Meetings set.
- Meetings confirmed.
- Shows and no-shows.
- Offers / opportunities moved forward.
- Deals closed.
- Deal value / revenue closed.
- Cash collected.
- Leads moved to nurture.
- Leads lost.
- Overdue follow-ups.

Rep manually adds only

- Important conversations / leads management should know about.
- Main objections heard today.
- Any blocker/problem.
- Priority for tomorrow.
- Short optional notes.

Manager EOD view

Managers should see every setter and closer side by side, with activity -> sets -> shows -> closes -> cash collected. Clicking a number should open the leads behind that number, not just show a statistic.

11. Reporting Dashboard

- New leads.
- Uncontacted leads.
- Follow-ups due / overdue.
- Meetings set.
- Confirmed meetings.
- Show rate.
- No-show rate.
- Closed won / lost.
- Close rate.
- Deal value.
- Cash collected.
- Setter performance.
- Closer performance.
- Lead source / campaign performance.
- Campaign results.

12. Users & Permissions

Keep permissions simple. We mainly need the following roles:

- Admin/Owner - sees and controls everything.
- Manager - sees the team, reporting, EODs and can reassign leads.
- Setter - works assigned leads, follow-ups, notes, messages and sets meetings.
- Closer - sees assigned meetings/leads, notes, calls, outcomes, closes and cash collected.
- Read-only/reporting user if needed.

13. Exact Lead Journey

- 1 Lead enters** - From a form, CSV import, manual entry, API/webhook or campaign response.
- 2 Lead is created** - Store contact information, source, form answers, tags and attribution.
- 3 Lead appears in pipeline** - Start at New Lead or the stage chosen by the form/source.
- 4 Setter works lead** - Contact, add notes, set follow-ups and move through Contacted / Call 1-4.
- 5 Lead books** - Calendly booking attaches to the lead and moves to Meeting Booked.
- 6 Closer works meeting** - Closer sees the complete history, form answers, notes and important conversations.
- 7 Outcome** - Show / No Show / Follow-Up / Nurture / Closed Won / Closed Lost.
- 8 Revenue recorded** - If won, store deal value and cash collected.
- 9 Reporting updates** - Setter, closer, campaign, pipeline and EOD numbers update automatically.

14. Do Not Build Right Now

- Full funnel/page builder.

Build the essentials first. This is a sales CRM, not a full GoHighLevel clone.

- Built-in power dialer/autodialer.
- Website builder.
- Social posting.
- Courses/memberships.
- Reputation/review management.
- Full accounting system.
- Anything that does not directly help the sales team capture, follow up, book, close, nurture or report on leads.

15. Simple Build Acceptance Checklist

- ☐ A lead can enter the CRM and appear in the correct pipeline.
- ☐ A setter can move the lead through stages and add notes/follow-ups.
- ☐ A Calendly booking attaches to the correct existing lead.
- ☐ A closer can see the full lead history before the call.
- ☐ SET / SHOW / CLOSE / LOST / NURTURE actions update the pipeline and reporting.
- ☐ Deal value and cash collected can be entered and reported.
- ☐ Email/SMS/WhatsApp can be connected and messages stored under the lead.
- ☐ Bulk campaigns can be sent to filtered groups.
- ☐ A Calendly booking automatically triggers the required confirmation email and text/SMS message and stores them under the lead.
- ☐ Mass email, mass SMS/business-number messaging and mass WhatsApp campaigns can be sent to filtered lead groups.
- ☐ A form can be created, embedded externally and redirect to Calendly.
- ☐ EOD activity is automatically calculated from CRM activity.
- ☐ Managers can see the leads behind every performance number.
- ☐ No Excel sheet is required to run the core sales process.

Developer summary: Build one clean sales workspace. A lead comes in, gets worked, booked, followed up, messaged, closed or nurtured, and every action automatically feeds reporting and EODs.
